DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 16-20, drawn to a method, classified in class 438, subclass 128.
- II. Claims 1-15, drawn to a device, classified in class 257, subclass 202.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of the Group I process invention would not necessarily imply unpatentability of the Group II product invention, because the Group I process invention could make a materially different device from that of the Group II invention. For example, the process of claim 16 could used to make a transistor comprising a first conducting structure upon a substrate, a second conducting structure upon said substrate, with the projection of said second conducting structure onto said substrate not intersecting the projection of said first conducting structure onto said substrate; said transistor comprising third and fourth conducting structures, said

third and fourth conducting structures formed in, but not upon, said substrate, a device materially different from the devices of claims 1 and 10.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
